

When it comes to advances in modular construction, we've got some amazing storeys to tell.

If we told you that the building pictured here was actually one of our modular solutions, it's quite likely the first words out of your mouth would be, "No way!".

It's okay. We're used to it. Because for the better part of the last 25 years, the state-of-the-art of modular building solutions has been slowly and steadily evolving to the point where there's actually very little that a modular solution can't do versus traditional construction.

When Charter School in Philadelphia, needed to add a multi-storey extension, the building challenges they faced, including a busy downtown location and limited land on which to build, made modular construction the ideal solution.

This four storey, glass façade, steel and concrete addition was built completely at our manufacturing facility. It was then shipped to the job site where each module was quickly craned into place.

The client was happy because the extension was fully erected

within 15 days. And the city was happy, because there was minimal disruption in the busy downtown core, which certainly would not have been the case with conventional construction.

The flexibility, practicality and savings in time and cost that NRB modular building solutions represent continue to grow and grow.

If you're not capitalizing on these advantages, it's probably because you just don't have enough modular knowledge.

But that's easy enough to remedy. Because at NRB, we wrote the book modular construction in today's building industry. It's called **The Rise of Modular Building Solutions**. We invite you to visit us on line at www.nrb-inc.com and register to receive a copy of this very informative document.

At NRB, we've got some amazing storeys to tell. And we'd like nothing more than to help you create some of your own.
