We've been working with Linux since this look was actually considered cool.

Since Kernel1.0., more than17 years ago, Sangoma's WAN routing and development platforms have been providing rock solid support for Linux.

Our laboratory certified WAN solutions for Frame Relay, PPP, HDLC and X.25 include the tools you need to support, maintain and debug your network.

In the most up-to-date fashion available.

Sangoma expertise.

WE'RE WITH YOU ALL THE WAY

Say hello to the first ADSL card designed for Linux & FreeBSD. It should make a few waves.

Introducing Sangoma's new S518 card. It enables any Linux or FreeBSD user to enjoy Broadband Internet connections with the reliability, high-performance and control of an integrated ADSL solution.

Additionally Sangoma's ADSL WANPIPE™ solution provides the same high-level of performance and ease-of-use you have come to expect with our other award winning WAN connectivity products.

Sangoma connectivity.

In the words of your students, when it comes to WAN education, there' no substitute for a hands-on, real-time, wham-bam lab environment.

Introducing Sangoma's new WAN Edukit™. It enables you to deliver, for the first time, a genuinely superior level of WAN education.

The WAN Edukit™ is designed to help prepare your students for the real world challenges they'll be facing.

How? By putting you and your students into a well-documented, real-time laboratory environment which allows you to demonstrate a variety of WAN protocols including: X.25, Frame Relay, HDLC, SDLC, PPP and SS7.

Sign up for a free on-line WAN Edukit™. demo today.

Sangoma innovation.
