

NRB MODULAR BUILDING SYSTEMS FOR SCHOOLS

Let's just say that our
current curriculum
is every bit as varied as yours.

Since 1979, NRB has been working to advance modular building techniques.

One of the major innovations we have brought to the process is the inclusion of steel and concrete materials, which, in turn has created a new generation of modular construction.

Today, NRB modular structures typically challenge most on-site construction methods, And because of their inherent advantages, often prove themselves to be the smarter and more practical choice.

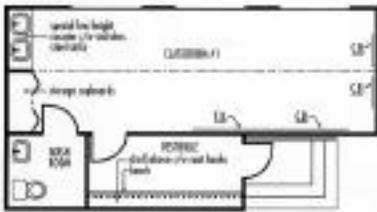

We call our method, **The NRB Total Building Experience™**. It is a process which begins with computer aided structural design, continues through production at our manufacturing facility and completes with the installation at your site.

NRB modular construction employs only the highest quality standards, and our products offer real strength, reliability and exceptional performance over time. But most importantly, everything, from materials to labour is fully guaranteed.

NRB INC.
modular building specialists

The NRB Total Building Experience™. You can really go to school on it.

NRB classroom modules can be specifically designed for young children with: adjacent toilets, in-classroom sinks, special low-height tack and chalkboards, bright, easy-clean wall surfaces and carpet or tile floors.

Your Needs & Our Capabilities

You may require an addition to your existing school building. Or you may need an entirely new school. You may want to add an activity room, gymnasium or additional classrooms to handle increases in enrollment. You may be adding a junior kindergarten, computer room or a new library. Whatever your need happens to be, NRB Modular Building Systems are designed and engineered to handle them, and provide you with a well-designed, well-built, fully equipped structure faster, and in many cases, more cost effectively than traditional on-site construction techniques.

Our Principal Advantages

There's a lot more to NRB than just the quality of our materials and attention to detail that goes into the design. Putting The NRB Total Building Experience to work also means **reduced overall construction time**, because the construction of your building and the development of your site actually occur simultaneously. This leads directly to a second major benefit, which is a **dramatic reduction in the amount of site inconvenience**, which can be both distracting and potentially hazardous.

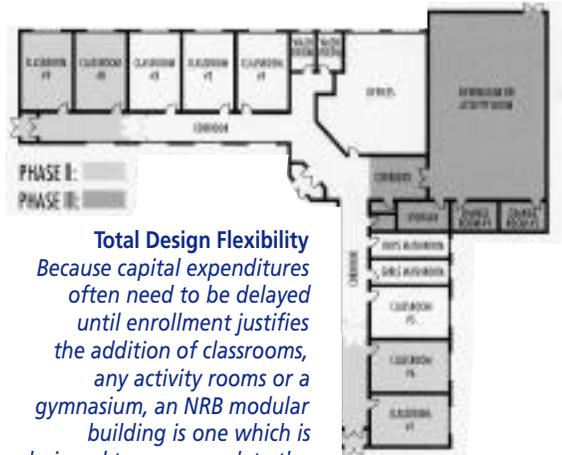

NRB Means Multiple Choices

NRB is a highly customer driven company– and we recognize that every client has their unique and special needs.

So from interior and exterior finishes to mechanical and electrical requirements, you can be certain that your building will be custom designed to totally suit your particular needs.

And, in addition to building your facility NRB can also complete as much or as little of the site work as you desire.

At NRB, we pride ourselves on being a cost effective and time sensitive alternative to conventional building methods–one which allows you to achieve the exact results you are looking for in less time and with less disruption to the operation of your school.

Total Design Flexibility
Because capital expenditures often need to be delayed until enrollment justifies the addition of classrooms, any activity rooms or a gymnasium, an NRB modular building is one which is designed to accommodate the addition of these rooms or even a second storey when it is required in the future.
